Main Tools

TypeScript React Vue Tailwind CSS

Roles

Front-end Engineer Architecture & Design Tech Lead & Mentoring

Values

Autonomy High standards Healthy relationships Team spirit Active communication

Work Experience

07/2021 - present

Foshan, Guangdong, China

Guangdong MillCloud Technology Co., Ltd. — Front-end Lead

Team leadership and project management

- Lead a five-person team building and maintaining cross-platform education products: web, desktop, mobile and mini-program.
- Scope requirements with the client, then break the work into tasks the team can pick up.

Technical design and architecture

- Own the front-end architecture, keeping systems extensible and maintainable as they grow.
- Design and ship technical solutions, both greenfield builds and fast delivery on a low-code platform.

Hard problems and new practice

- Introduced convention-over-configuration structure, server-state management, and JSON Schema driven forms and tables.
- Untangled request state, decoupled modules and cut page load times, improving both performance and the user's experience.

Modernisation and process

- Led the upgrade of legacy projects, simplifying their architecture and lifting system performance.
- Introduced unit testing, CI/CD and monitoring, raising project quality and team throughput.
- **~21% faster builds**: about 18% smaller build output, and about 19% less outbound traffic from the cloud instances.

Guangdong Teaching Research Digital Intelligence Platform

- Built a provincial education research platform on the JVS low-code base, combining low-code, no-code and full-code development.
- Extended the JVS front end: introduced tooling, refactored code, widened the low-code feature set and reworked the interactive experience.
- Connects to several external systems, moving education research online across the province.

05/2021 - 07/2021

Foshan, Guangdong, China

Globus LTD. — Full-stack Engineer

Product features

- Built inspection-record capture and in-browser PDF preview for the internal ERP system, speeding up processing for its users.

Architecture migration

- Researched moving the Express back end to Serverless Framework, to gain availability and elasticity from AWS serverless compute while cutting operational cost.

06/2019 - 04/2021

Guangzhou, Guangdong, China

Guangdong MillCloud Technology Co., Ltd. — Front-end Engineer

Taking over a legacy codebase

- Took charge of a legacy project and refactored it, unifying the stack and restoring cross-platform compatibility and maintainability.

Restaurant chain platform (Ducheng Fast Food)

- Led the design and delivery of a restaurant chain's website, mini-program and mobile app, covering back-office management and reporting for clients, customers, outlets, staff and orders.
- **5,000+ daily users**: on the mini-program and mobile app, with monthly transaction volume reaching RMB 10 million.

Online education resource library (MTU)

- Designed and built a course-material library from scratch, comparable to a document cloud: authoring and managing teaching resources, publishing announcements, discussion and resource sharing.
- **100+ courses hosted**: more than one million visits to date.

Side Projects

vite-plugin-eslint2 — 02/2022 - present

Run ESLint as part of a Vite build. Downloaded about 111k times a week, used by thousands of projects, and bundled into Nuxt's official module (@nuxt/eslint).

vite-plugin-stylelint — 08/2021 - present

Run Stylelint as part of a Vite build. Downloaded about 57k times a week, used by thousands of projects, and bundled into Nuxt's official module (@nuxtjs/stylelint-module).

uni-helper — 12/2020 - present

A better development experience for the uni-app family, covering VS Code, TypeScript and npm integration. It supports thousands of uni-app projects.

Education

Sun Yat-sen University — 08/2015 - 06/2019

Bachelor of Engineering, Software Engineering (Mobile Information Engineering)

Qualification Certificate

- System Integration Project Management Engineer, Computer and Software Technology Proficiency
